

Recommendation

If using Hardwood decking, you have to pre-drill wood board with drill diameter 4mm.

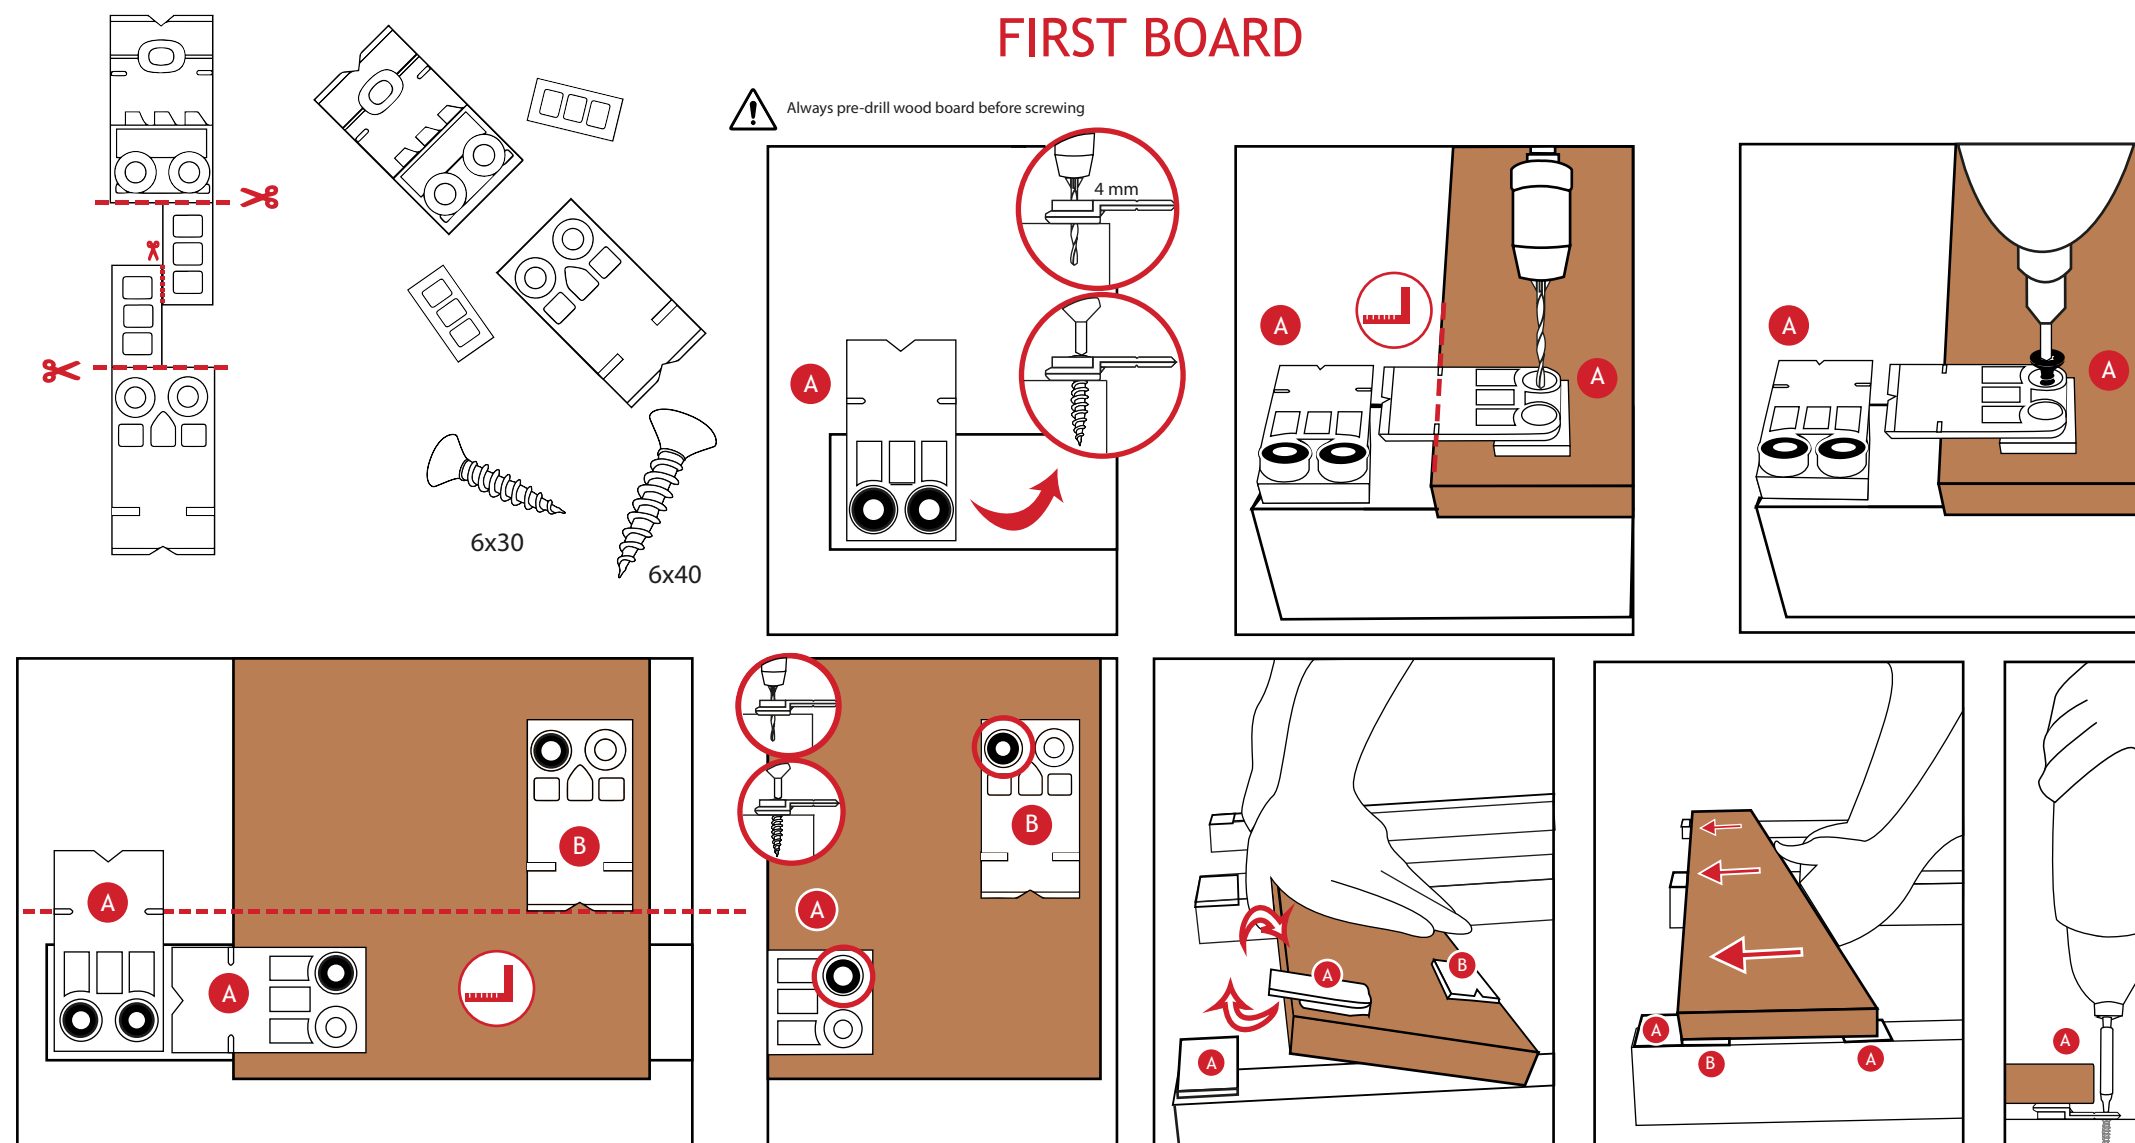

Adjust by hand the spacing between wood boards

If using :
 Wood kiln dried - 18% humidity = minimim 5 to 6 mm
 Wood air dried +18% humidity = maximum 4 to 5 mm

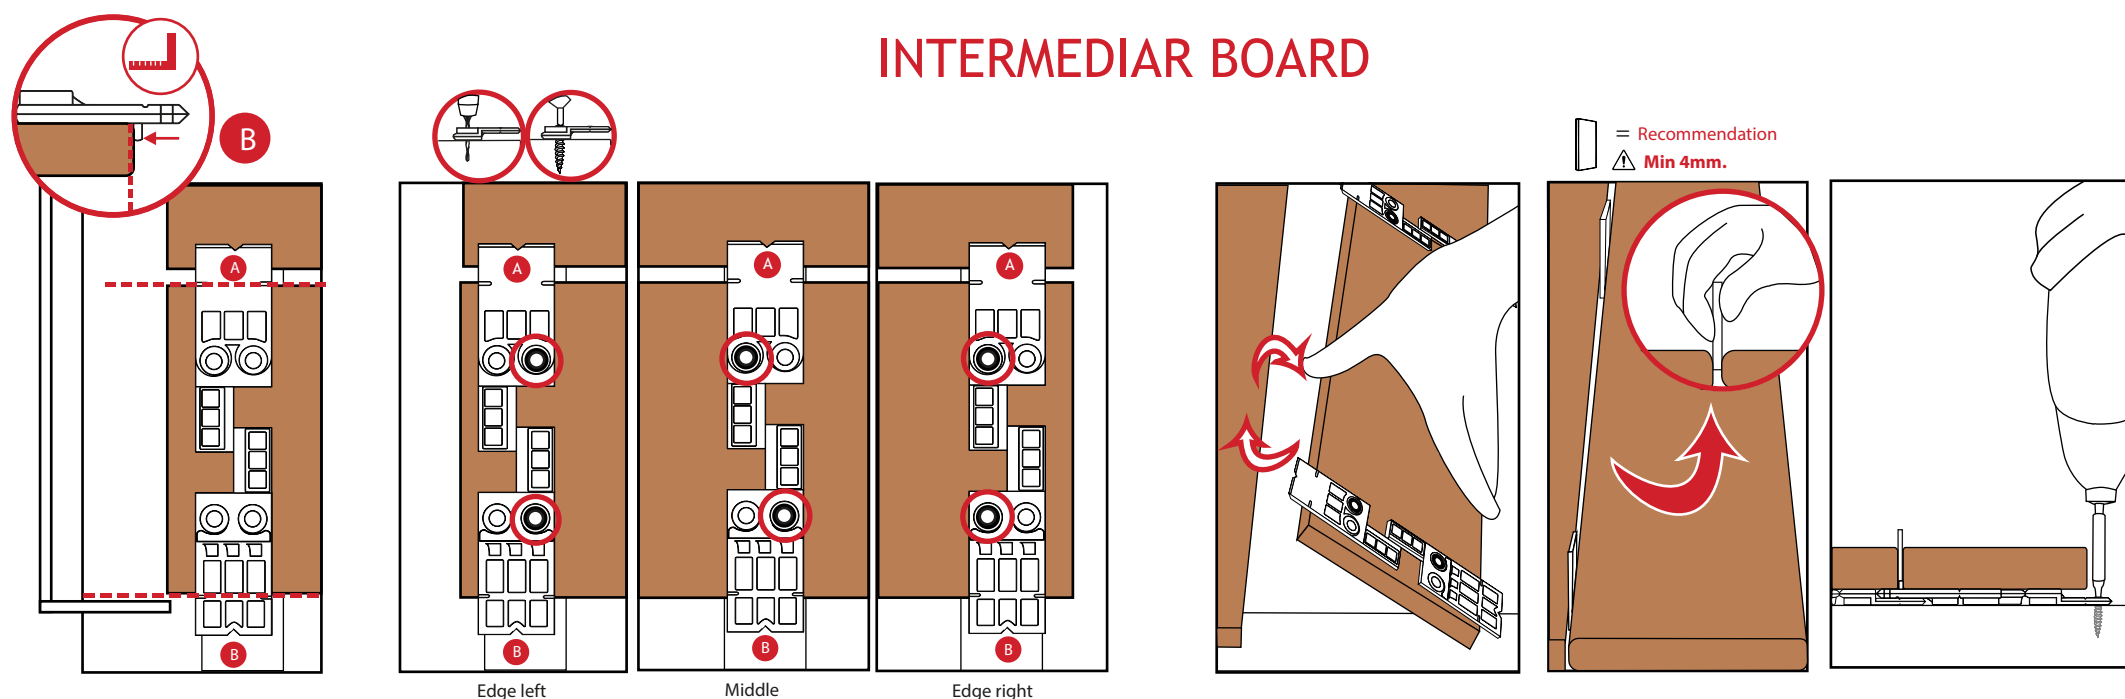

Be careful : Don't use Hapax Fixing with composite wood deck, wood board inferior to 21mm of thickness.
